Description of Property and Eligibility Determination:

This structure is a standard concrete rigid frame, with a three-foot span, which has been extended on both ends with box culverts. It exhibits severe spalling, with erosion causing a deep hole in the sidewall.

This structure is not eligible for listing in the National Register due to lack of integrity. This structure is a standard concrete rigid frame, with a three-foot span, which has been extended on both ends with box culverts. We have determined that this structure lacks the requisite integrity as well as a sufficient degree of intact character-defining characteristics to be considered eligible for inclusion in the National Register as a type of concrete rigid frame small structure. To be considered for listing, according to the Small Structures on Maryland's Roads, Historic Context Report (p. 4-10) concrete rigid frames should retain parapets, abutments and wingwalls as primary character defining elements of the substructure. Although this structure retains these elements, it has been extended with box culverts on each side, which likely resulted in the construction of the present outer walls at the time of the widening. These changes have compromised the integrity of the structure.
